Chuck Wood

Chuck brings a unique blend of expertise, with financial accounting experience from industry and healthcare roles at Siemens Healthineers, Health Catalyst, and EXL. He has worked across diagnostics, therapeutics, population health, digital health, payer analytics and supported health benefits strategy in union negotiations. He is committed to advancing Precision Health and data-driven healthcare, enhancing effectiveness, accessibility, and affordability, ultimately improving HealthSpan for all at lower cost.

During his 20+ years at Siemens Healthineers, Chuck managed a team supporting a geographic market of healthcare providers, delivering advanced imaging and therapy solutions that improved clinical effectiveness, operational efficiency, and patient outcomes. He collaborated with Laboratory Diagnostics to develop integrated care delivery approaches. Notably, his last role was VP of Population Health. This experience shaped his approach on precision health, AI-powered decision support, and digital strategies.

Currently, he is engaged in a collaborative project focused on revolutionizing care delivery through precision health innovations and advancements in digital technology, enabled by a new digital strategy placing the individual at the nexus. The project aims to shift from process- and revenue-centric models to outcome-driven, True Cost of Care frameworks, using Value-Based Experience (VBX) to leverage objective data and real-world evidence. This approach provides insights and accountability for individuals, providers and healthcare stakeholders to optimize outcomes, reduce costs, and improve HealthSpan.
